

INSTITUTIONAL POLICY AND PLANNING COMMITTEE
MEETING MINUTES

implementation and a clear communication plan, including information in Admissions materials and campus signage.

Following this discussion, the IPPC meeting was concluded and the Subcommittee on Strategic Planning met for its first meeting.

The IPPC subcommittee on Student Affairs recommends that the College take the following steps to become a Smoke-Free Campus by Fall, 2017:

7. Designate an area on the interior of the College's campus to be smoke-free beginning Fall, 2014.
8. all buildings to be smoke-free beginning Fall, 2014.
9. Greenburg Child Care Center, the Early Child Care Center and the Sports Center are smoke-free environments.
10. Develop and implement a comprehensive, aggressive smoking cessation program by Spring, 2014.
11. Create a comprehensive smoking policy to be distributed to the Skidmore community by Spring, 2014.
12. Communicate to the community the following expectations about the enforcement of the new policy: All members of the Skidmore community share in the responsibility to enforce the new smoking policy. Individuals found in violation should be reminded in a courteous manner of the college policy. However, existing protocols will be used to address repeat smoking policy violations.

The IPPC subcommittee on Student Affairs investigated the Skidmore College Smoking Policy during the 2012-2013 academic year. The following items informed our recommendation:

1. Survey results from MB355/001, 2011 - 2012 with 615 student participants.
2. Three community meetings including faculty, staff and students, 2012.
3. A college-wide survey of students, faculty and staff with approximately 1000 participants.
4. Collaboration with the Safety in the Workplace Committee.

Key Results:

Community meetings quickly identified this issue to be potentially divisive. Non-smoking students/faculty were keen to reduce their exposure to smoke. Smoking students varied from respectful of non-smokers to defiant against any changes to the smoking policy. Somewhat stunningly, some students referred to the "pro-smoking" culture on campus as a reason for their starting, and continuing, smoking.

As shown in Figure 1, Question 9, only a minority of students, staff, and faculty are comfortable with the current level of smoking on campus. This informed the committee's recommendation to change the smoking policy on campus.

As shown in Figure 2, faculty and staff have different opinions than students. The top preferred choice for students is "No change to the smoking policy" whereas faculty and staff both prefer a "Smoke Free" campus above other choices. These polarized opinions informed the committee's recommendation for a staged approach to becoming a smoke-free campus.

2011 survey demonstrated that the following issues were of concern: fire safety, campus cleanliness and second-hand smoke.

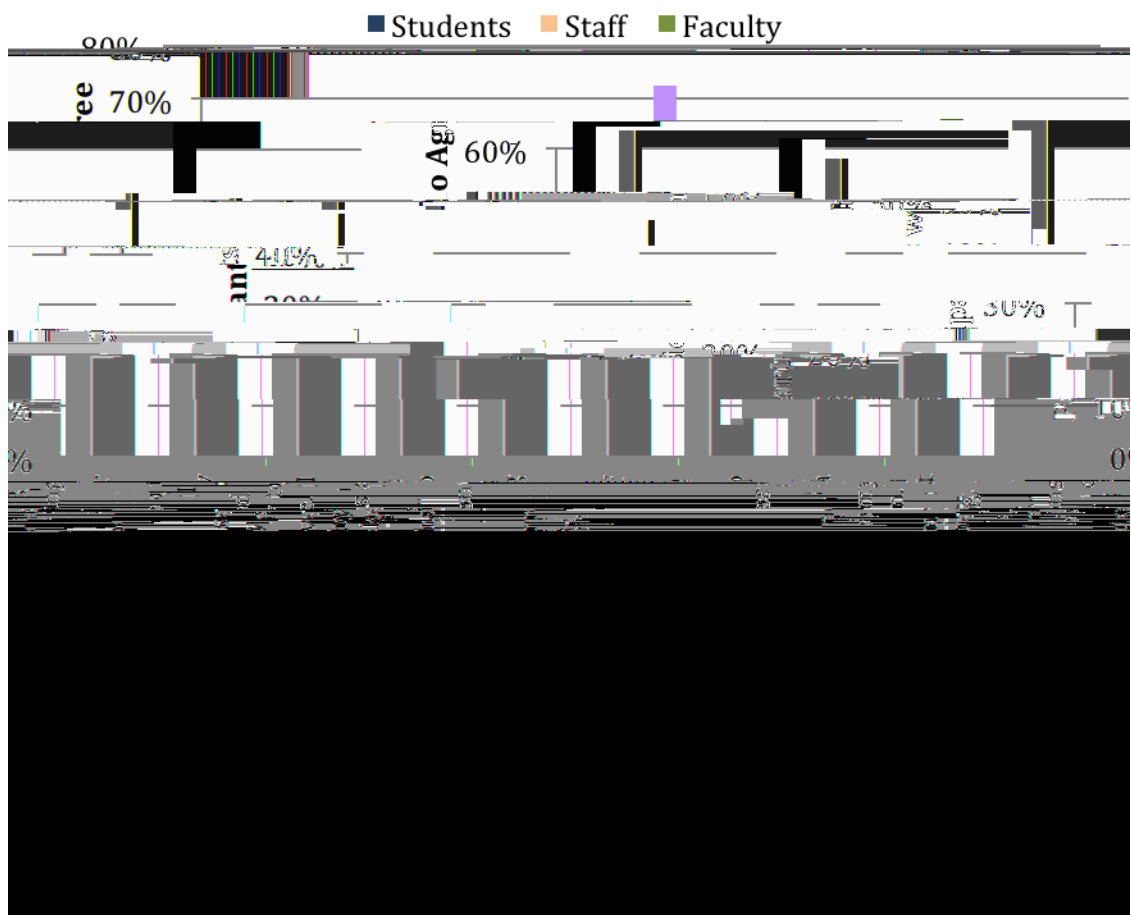

Figure 1: Survey Results on agreement with the following statements regarding smoking at Skidmore College.
